

The airwaves are public and BPL should not be allowed to interfere with any bands, whether amateur, CB, utility, etc., If BPL works, great. But, living in the Midwest, and knowing many farmers, the idea of increased electric bills to provide internet service will make them very happy, especially when running grain driers 24/7. BPL is not a "great" technology. Wireless internet, like that of DTN, is a better way.
